

What is an ATTIC-TENT?

The Attic Tent is the ultimate attic access insulation cover ever invented (attic stairs, scuttle holes, knee-wall doors, and full-size doors.) Its primary design is to stop air infiltration between the home and attic, the most common medium for wasting costly residential energy, during both hot and cold seasons. The HVAC systems in homes are designed for a closed envelope making air balancing with supply and return air, very critical. Every time these systems are operating they create a positive or negative pressure, thus forcing conditioned air out or drawing outside air in the home. It also keeps out unhealthy insulation and dust particles from the attic.

Why add the ATTIC-TENT to your current Contractor services?

- ✓ Can create additional revenue on every service call (\$100 to \$200)
- ✓ Contractors can buy Mfg. direct and Save on quantity purchases
- ✓ Comes fully assembled and installs in 15 minutes or less
- ✓ Customers will love the energy savings it provides
- ✓ Helps with Allergy control in the home (IAQ)
- ✓ Customers HVAC systems will perform more efficiently

The Attic Tent can be a new revenue source in 2009.
